

## BESGIARD 6 INCH GUTTER

Length	· 3m & 5m
Depth	· 122mm
Outlet	· 75mm
Capacity	· 28 l/s/m

## BESGIARD 8 INCH GUTTER

Width	· 225mm
Length	· 3m & 5m
Depth	· 140mm
Outlet	· 122mm
Capacity	· 28 l/s/m

## OUR RANGE OF FITTINGS

### CENTRE JOINT FITTING

The Besguard Centre Joint Fitting connects two gutters together. The fitting securely joins the gutters to prevent the edges from bending or warping. It is available in various colours to match the gutter's hue.

### CORNER / ELBOW

Besguard Corner Elbow Fitting is used to turn the direction of the gutter at a 90-degree angle.

### CORNER 45 / ELBOW 45

The Besguard 45-degree Corner Elbow Fitting is designed to alter the direction of the gutter flow.

### CENTRE DROP

The Besguard Centre Drop Fitting is utilized to join two gutters and facilitate the drainage of water through an outlet. Accompanied by a 'turning outlet', the outlet has a diameter of 90 mm (3 inches) in a round shape.

### CORNER DROP

The Besguard Corner Drop Fitting is used to alter the direction of the gutter at a 90-degree angle while also providing an outlet. It secures the gutter within a clip to prevent flipping of the edges. This fitting comes in various colours.

### END DROP

The End Drop fitting is used to not just the water with a smaller outlet than the 90 mm (3 inches) round. It locks the gutter inside the clip which prevents the edges from flipping out.

### END CAP

The End Cap fitting comes as a standard for the end of a gutter. It locks the gutter within the clip, avoiding any flipping out of the edges. End Cap comes in a range of colours to match the hue of your gutter.

### CLAMP

Clamps are useful fittings for any gutter system with the strength of the clamp improving the integrity of the gutter. The clamps secure the gutter within the clips and prevent flipping of the edges, and they also spread downwards to protect your gutters. The maximum distance between each clamp should not exceed 7 meters.
